

Cyber Security Penetration Testing Services

Ethical Hacking Services

Valency Networks

Valency Networks is a firm specializing in the field of IT infrastructure design, deployment, and process management. It also offers highly technical solutions in the area of IT/Cyber Security too. Our mission is to be a technology and business solution provider, in the niche areas of IT infrastructure services, by leveraging years of global technical experience we possess. Our mission is to provide offerings which results into a high performing, scalable, reliable and redundant IT infrastructure for our customers to help improve their ROI.

Our Philosophies

Security is never 100%, but in fact it is an ongoing process, which demands for continuous improvement

Security is not just about the products but about the customized solutions

Security is a two way process which involves us as well as the technology management on client's side

Corporate firms having their own IT infrastructure are prone to risk of hacking. Firm's data or their customer's data is at stake, because if it is stolen it can cause reputational or monetary risks. Critical IT systems especially in case of banks and financial institutions are bound to be extremely cyber secure. It is imperative that such firms incorporate adequate and aggressive mechanism to be secure and non-vulnerable to the hacking attacks. Valency Networks provides VAPT assessment tests to ethically check holes in the network walls and provide a unified and highly technical solution service.

SERVICE INCLUDES

- . External Network Penetration
- . Internal Network Penetration
- . Black Box / White Box Hacking
- . Web Ethical Hacking
- . Wireless Ethical Hacking
